Visualization of Cancer SEER data

Summary:

Cancer SEER data of United States of America contains all the registered cancer cases in its catalog with detailed information of each patient and his/her case study.

The SEER data helps to analyse cancer risk rate, survival months of patient with respect to the malignant/situ tumor and patients death risk rate.

آئ½1.1 Number of Patients by Sex

Total -

MALE (1): 173,620

FEMALE (2): 129,324

تان 1.2 Number of Patients by State code

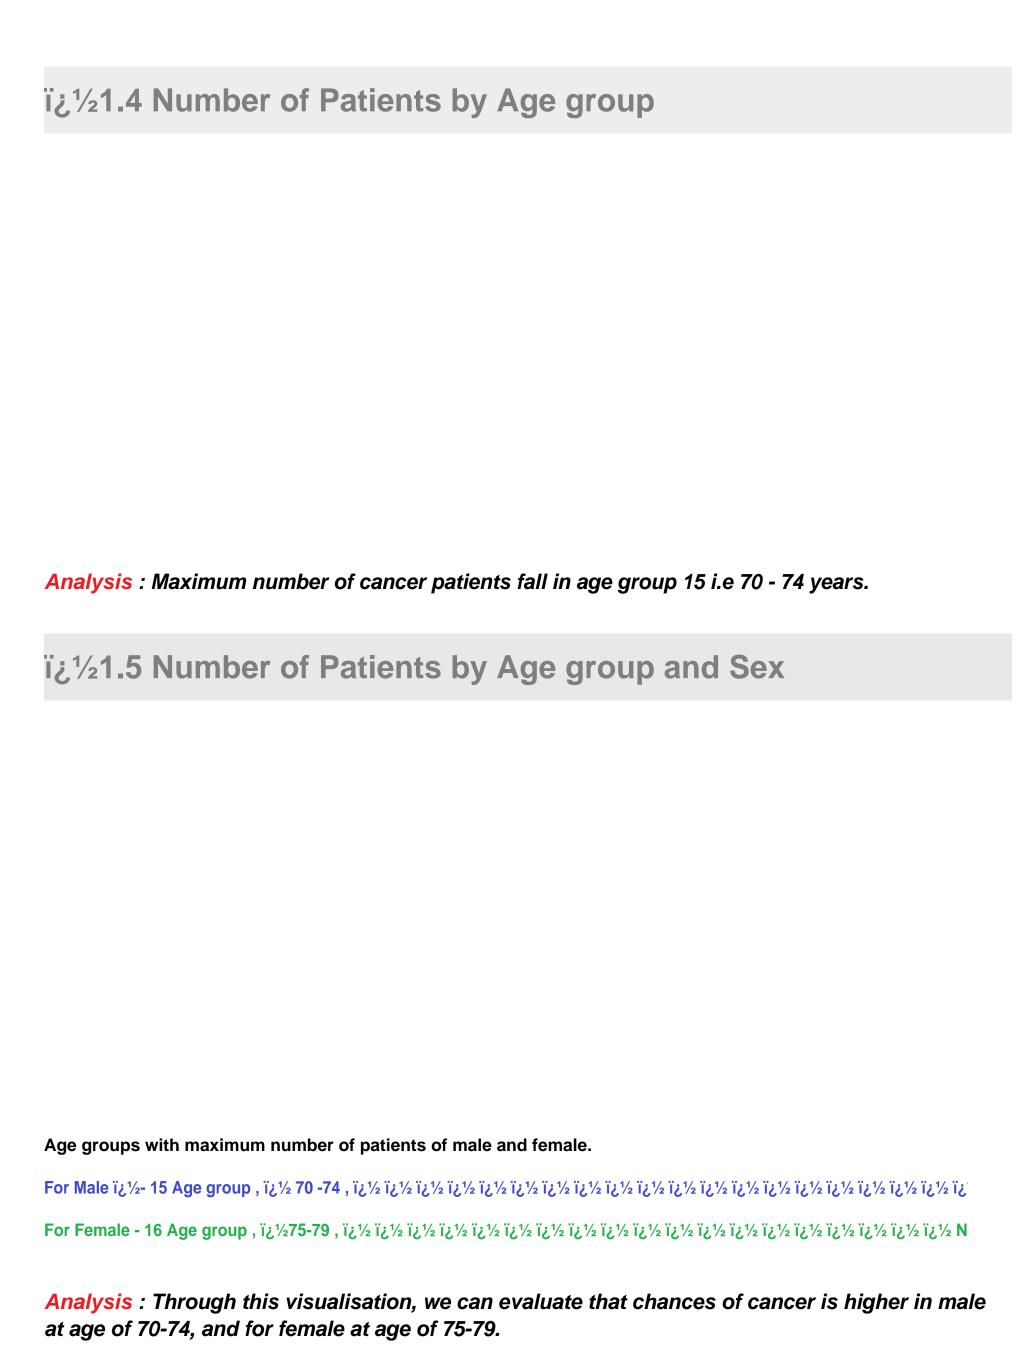

Analysis :�

- �Maximum number of Patients are from city Metropolitan Detroit of State code 1520
- Top three Cities that has maximum number of cancer patients:

1520 : Metropolitan Detroit. 1501 : San francisco� 1502 : Connecticut�

- Minimum number of patients are from city Seattle of State code 1525

�1.3 Number of Patients by State code and Race

تز½2. Risk of death

MALE�: Max number of Male cancer Patients are of age 75 with 0 survival month.

Female: Max numbe of Female cancer patients are of age 79 with 0 survival month.

Analysis:

Males at age of 75 has high risk of death with 0 survival month.

Females at age of 78 has high risk of death with 0 survival month.

Analysis: Highest number of cancer tumors are malignant that are recorded under SEER.

1.99%: Situ cancer tumor

98.01%: �Malignant cancer tumor

ï¿⅓3.2 Number of Patients by Survival month and total number of malignant/situ tumors for patient

Analysis: Maximum number patients are patients with 1 situ/malignant tumor and has 0 survival month" 1/2
